Helps improve communication and broaden global participation

Global Access

Hold Meetings Around the Globe With Verizon Global Access

As busy professionals become smarter about how to communicate and conduct business globally, they need to rely on advanced technologies to keep employees, customers, and clients informed.

In this new era of communications—one in which we are no longer bound by the limitations of time and location—conferencing is changing the very nature of how we work. By providing robust and flexible access options to multiple participants worldwide, Verizon Global Access can help.

Verizon Global Access provides a convenient, reliable, and cost-effective method for leaders and participants to join global conference calls on a single conferencing bridge platform. This advanced global conferencing of capability allows:

- Users to meet at their convenience – anywhere in the globe – by providing participants with a choice of local dial-in numbers
- Leaders and participants to have more flexibility with a variety of flexible access methods to join their conference calls (Verizon distributes both in-country local toll access numbers or in-country local Freephone numbers.)
- Leaders to manage their calls more efficiently and effectively with a variety of call management features activated using touchtone commands on the telephone key pad

How Does Global Access Work?

- All Conferencing users dial a local, in-country phone number (local toll or Freephone) from their respective location and are joined together on Verizon's common bridge platform.
- Users dialing in on local toll access will pay their local telecom provider for any charges that are incurred to connect them to the appropriate local access city:
 - Local toll access offers a cost-effective way to join a call for a diversely located group of people as the callers will pay access charges associated with their call.
 - Local Freephone access provides a call leader with the ability to invite customers or other external parties calling from a wide variety of countries to join a call at no cost to them. Local Freephone is ideally suited for marketing campaigns, launch activities, or key client briefings, which allow the leader to cover the cost of the call for their attendees.

Why Choose Global Access?

- **Global Access provides value.** Users can avoid the cost of maintaining their own expensive international toll-free numbers or direct dial connections.
- **Global Access provides flexibility.** Global access toll numbers can work across country boundaries, if required.
- **Global Access is reliable.** Verizon Business customers can be confident of high-quality, error-free calls all day, every day.
- **Global Access provides consistency.** Verizon's Global Access solution provides customers with access to the same set of countries across the globe, irrespective of where they are located or where their call is originated from.
- **Global Access allows choice.** Conferencing leaders can provide a choice of access numbers to their participants dependant on requirements.

Enhance Your Global Conferencing Calling Capabilities Today

Local Toll and Freephone numbers are currently available in 24 countries around the globe. For more information, including the most up-to-date Global Access numbers, please contact your Verizon Business account manager or call a Conferencing specialist at one of the following numbers:
